CERTIFICATE OF ANALYSIS

CATALOG#	SER-PRP
DESCRIPTION:	Human Platelet Rich Plasma
LOT NUMBER:	**w43842503424200**
LOT COMPOSITION:	
▸ Number of donor(s) in lot:	1
▸ Age (years):	52
▸ Gender	Male
▸ Race:	Hispanic
▸ Diabetic:	Unknown
▸ Smoker:	Yes
▸ Blood Type:	O+
▸ Medications:	None
▸ Anticoagulant:	ACD

DESCRIPTION

Human plasma was obtained from competent, consented adult volunteer donors undergoing an elective procedure in the USA who have signed a US Food and Drug Administration (FDA) or Institutional Review Board (IRB) validated donor consent form that specifically lists both the intended uses for non-clinical research and confirms the procedures for processing the samples are Standard Operating Procedure (SOP) managed Good Laboratory Practices (GLP) protocols in compliance with ethical regulations. All samples are collected and processed in the United States

The plasma is collected by venipuncture, then processed using centrifuged techniques enrich the number of platelets. Platelet Rich Plasma is shipped at ambient temperature and should be used within 5 days of collection.

PATHOGEN TESTING

Each lot is tested via PCR and found non-reactive to viral DNA from Hepatitis B and viral RNA from HIV 1, HIV-2 and Hepatitis C. Hepatitis B Surface antigen (HBsAg) and HIV antibody (Ab), ZIKA Virus and STS (Syphilis) are also found non-reactive by US Food and Drug Administration (FDA) licensed tests. No known test can offer complete assurance that these viruses are not present. Since we cannot test all pathogens, always treat the culture as a potentially infectious reagent. We recommend using the US Centers for Disease Control (CDC) Universal Precautions for prevention of blood-borne pathogens as a minimum guideline for standards of practice at Biosafety Level 1 or higher.

These results have been verified. *SIGNATURE ON FILE* 20 March, 2026
